

CHRONO TOKEN's WHITE PAPER

By 'Crypto Dev' Team

ChronoToken

The First Binance Smart Chain DeFi Token with a Game Prize for the holders.

CTK

A Binance Smart Chain DeFi deflationary token with non-custodial staking and Game Prize support.

Abstract

Automatic 12% distribution from every transaction. 3% distributed to holders, 3% burned and 3% to the pot of the **ChronoGame**.

ChronoToken: The First Binance Smart Chain DeFi Token with a Game Prize for the holders.

Cryptocurrencies should be FUN. It must support and build communities, while storing value and providing a platform for future wealth. And it must be ETHICAL. People must be safe to invest without the risk of developers abandoning the token, and what better way to create a crypto game within the platform, establish prizes from time to time to the same investors.

CTK has been born from these principals. CTK is the first altcoin from the **Crypto Dev Team**, a group of crypto professionals committed to a sustainable and fair future for crypto.

Holding CTK in your own wallet rewards you with distribution from any on-chain CTK transaction.

Every CTK transaction also generates a burn of tokens and a distribution to the Game Prize safe.

The 3% distribution means that your CTK total goes up with every purchase or sale of CTK on-chain. So, if there is a period of high-volatility you can slow your heart rate knowing that every single one of those trades pays you something, with your portion of the 3% being based on the size of your holding of CTK.

Every transaction also generates a 3% burn of the tokens being transacted. So CTK is deflationary, and after every on-chain transaction there is less CTK in existence. The number of CTK tokens is capped at launch at **555,555,555**, so there will never be more CTK than there is right now! As more CTK burns and it gets scarcer we expect the intrinsic value to rise.

And finally, to complete the CTK system, every transaction generates a 6% distribution to Game Prize. Many times, a week we will make a Chrono Game to using 100% of the accrued distribution balance in the Game Prize Wallet.

With CTK your balance increases, your asset gains intrinsic value in each transaction, whoever does it. Could this be the perfect crypto? Our answer is yes, because we have **some better projects in mind** for the future, we will explain to vote which one do you prefer that we launch first. This is the first of the causes for which we don't want to flee.

Non-custodial staking

You don't need to stake your CTK to get distributions from every transaction. Just hold CTK in your own wallet and watch the distributions rain down, boosting your CTK balance automatically.

Transactions and Tokenomics

CTK is a token on **Binance Smart Chain** with a 12% reflect amount on each transaction. We can calculate the burn and distributions from the following formulae.

- $\text{DistributeAmount} = \text{TransactionAmount} / 12$
- $\text{DistributePerAddress} = (\text{DistributeAmount} / 3) * (\text{AddressOwnedCTK} / (\sum \text{TotalCTK} - (\text{BurnedAddressOwnedCTK} + \text{CharityAddressOwnedCTK})))$
- $\text{BurnedAmount} = \text{DistributeAmount} / 3$
- $\text{PrizeAmount} = \text{DistributeAmount} / 6$

In simple terms, for every CTK transaction 3% of the transaction is burned, 6% goes to the Game Prize Wallet and 3% is shared among every holder in CTK, with each wallet receiving as share proportional to its holding of CTK.

Below is an example of how these tokenomics work:

Address **0xCTKONE** owns **50,000,000** CTK. A new wallet called **0xCTKTWO** buys **300,000** CTK on PancakeSwap, using 5% slippage and setting the CTK amount to a round number (ideally ending in zero).

● The distribution amount from the **0xCTKTWO** transaction is **36,000** being 12% of the total transaction. So **0xCTKTWO** receives **264,000**. Goes to **0xCTKTWO**

● At this time there is **100,000,000** CTK that has been burnt and **24,000,000** CTK in the **Game PrizeWallet**.

● The total CTK on holder wallets is the total supply of CTK minus the burned amount and the amount in the Game Prize wallet. So this is **555,555,555 - (100,000,000 + 24,000,000) = 431,555,555**. We will call this total held CTK.

● The distribution to **0xCTKONE** from this transaction is **36,000 / 4** multiplied by **0xCTKONE's** percentage of total held CTK. This is **9,000 * (50,000,000 / 431,555,555) = 1.042,7394452** CTK. → **50,000,000 + 1.042,7394452 = 50,001,042.7394452** total for Address **0xCTKONE**

● The burned tokens from this transaction are the distribution amount / 12 * 3. So, in this case we are burning **36,000 / 4 = 9,000** CTK.

● The game Prize tokens from this transaction are the distribution amount $36,000 / 12 * 6$. So, in this case we are sending $36,000 / 2 = 18,000$ CTK to the Game Prize Address.

● Other CTK holders receive a total of $9,000$ CTK, distributed to them wallets based on their percentage of total held CTK.

What tokens do the team have? What liquidity is there?

The founders of **Crypto Dev** were each allocated **3%** of the total supply of CTK (**16,666,666 CTK**).

There are **six founders of Crypto Dev**, making a total founder allocation of **99,999,999.9** or **18%** of total supply. In addition, **3%** of the total supply of CTK has been allocated to the **team marketing** and **operations fund**. Total **116,666,666 CTK**, This will be used solely to promote **Chrono Token** and to meet operational costs, such as hosting for the website, advertising, etc. Everything else (**79%**) will be added to liquidity, that's minds **438,888,888** free for trading.

CTK community

The CTK token is the cornerstone of the CTK community, but it's really just the beginning.

We are seeking to engage with our community in a variety of ways, including through the usual social media channels but also through special events like NFT giveaways and others projects.

The CTK website <https://chrono-token.com/> will act as the portal to the CTK community.

CTK Roadmap

This is just the beginning - check out our roadmap for CTK. Also look further down for details of what **MasterDev** have cooking in the future.

● **October 2021** - Website launch, social media up and running, initial marketing. pre-sale will be with **IFO** buying **LP Tokens** in **pancakeswapp**.

We have a minimum expected amount of funds recovered in this way, of **10,000\$** and a maximum of **50,000\$**, whatever happens before, the **maximum** or the date of **01/01/2022** will be the time to move on to the next phase, as long as when you have exceeded the minimum established to continue.

This **minimum** only covers the cost of production, development, the basic salaries of our associates in the **CryptoDev** team, and other derived expenses, such as the maintenance of servers, equipment, domains, emails, etc. typical of all application development.

And the **maximum** I would expand those funds to be able to expand the company towards new projects, new partners and new facilities, because at the moment we each work remotely from their country of origin, but our thought is to set up a headquarters in Paris or Madrid to be able to meet at least the six of us. founders, because although remote work is fashionable, you do not know the difficulties we go through in order to be 100% immersed in development.

- Goes **maximum** or [01/01/2022](#) - **CTK** is launched and available for purchase.
- Goes **maximum** + 1 week, or [06/01/2022](#) - First **Chrono Game** announcement
- Goes **maximum** + 1 month, or [xx/02/2022](#)- see **CryptoDev Roadmap** in the web.

What's cooking CryptoDev?

Situation: Beach, summer, heat 40°C, August 15, in Fuengirola (Málaga) Spain.

A **Frenchman**, an **Algerian** and a **Spaniard** meet by chance on this beach talking about a puppy, a vacation and Spanish food, and people from Spain. At the end of the afternoon, they end up talking about **cryptocurrencies, application development** and **some ideas**.

Without knowing why, they had found a Marketing Expert and creator of several companies in France, a developer of web and mobile applications and a developer of Dapps with solidity who had just finished his degree in Algeria and was on vacation, This had to be a divine sign, what is the possibility, that a person goes to

the beach, because he is tired of working for others, his puppy brings a Chihuahua crossed with a precious hound, my 'Habibi', and that he escapes and ends up stepping on the towel of a French I was sunbathing and when he asked me what is his name? I answered his name is Habibi, the dog had no name at that time, it occurred to me there at that moment. That caused the laughter of the French and the Algerian who passed by and joined the conversation because he loves dogs and he had a similar one.

They ended up, being friends** with some projects in mind.

A month later, these friends, each one from their country, communicate by discord and begin to discuss that idea that was left on the beach in Spain, there the **ChronoToken** project was born, later they will look for three more people to help them in their Pawn, an **Indian** expert in DeFi and cryptocurrencies, a **Croatian** expert in graphic design and a **Swiss**, Lead Apps Dev, DEXs and Exchanges. All this people They were found, thanks to an advertisement that we put on the website for expert DAPPS developers, and that they answered.

The team couldn't be more diverse?

Six guys sat in the discord talking about altcoins. They were talking about how it should be possible to do it so much **better** than most of the coins out there.

How an altcoin could be the cornerstone of a community, generate REAL value, and make a crypto currency just for the holders, that they never lose even if they lose, and that they had the possibility of participating in a simple game related to the moment of the transaction, proposing on our part a chronogram (the exact moment of the transaction), which will return to some of those holders, some important prizes and in case that was not enough, returns 3% of it to each transaction in each transaction, proportionally to their participation. I will talk about this game after all.

With the holders right at the forefront. And that's ALL holders. The ones that got in early, the ones just getting in now, the small stacks, large stacks, all stacks.

Because when you deliver real value then everyone benefits. It's not a zero-sum game when you are **making** value.

And then the discord mod said “if you guys are talking about making your own coin then get the f**k out of my discord”.

And so we did, and into a discord of our own, and then things really started cooking. We started with the principles, because everything should start with the principles. We would never cheat. Not on each other, not on our holders. We would be leaders and custodians, not snake oil salesmen. It isn't necessary to cheat to 'make it'. If we do our jobs well and deliver a good product, a good coin and a good community, then we make money.

If we don't, well, we ride it to zero with you!

We operate as a DAO, with all decisions made by simple majority where the vote is more than 50%. If an idea isn't the consensus it's gone, for now, and then everyone is right back behind the team direction. And everything is split six ways equally. No expensive CEOs,

CFOs. In fact, no one gets paid! If our projects don't make it then neither do we.

We would build our reputation as a team, which would mean unflinching focus on integrity.

Every coin we release will be audited. We wouldn't expect people to buy something you

can't trust. We can't guarantee you the moon (let's face it, who *really* can?), but we can guarantee not to cheat you.

With the principles established, it soon became obvious that we had assembled a crypto dream team. We had every skill needed, from a top branding and design professional to some of the best web devs working in crypto. Smart contracts? Yeah, we know those.

Community engagement? Yup. Experience managing complex projects? Yup, we've got that covered too.

And so we begin with CTK, our *First Binance Smart Chain DeFi Token*.

This is just the beginning. Checkout the roadmap hanging in the **CryptoDev** kitchen.

Or as we like to call it, the **CryptoDev's Menu**.

****We are all in different time zones, and we work remotely.**

CryptoDev's Menu

●**CryptoDev v.02**– web previews and awards automation. You can vote for chrono games starting, more games and fewer prizes or fewer games and larger prizes, number of winners, percentage to be distributed among them, etc.

●**CryptoDev v.03**– This is our first simple idea, a crypto for the holders, we have other ideas in the mind, and we put in the social network for discuss, and vote for develop, here some of them:

1. **International lottery DAPP.** international lottery with 90% in prizes and without intermediaries, reliable, safe and impossible to hack
Participation by tokens, 3% burned, 3% for Charity, 3% for BIG ONG's automatic distribution of you invests.

2. **IShareMyId DAPP**, Identity recognition to streamline processes, such as online payments, website entry without user - password, linking with documents or data, etc. We will always be the owners of what we want to show and to whom, with the reliability and security (impossible to impersonate) that the block chain offers us.

●**CryptoDev v.04** – medium term project. **YouDecideNow.**

An automatic voting system, a room is created with x users (anonymous or not), one or more topics are chosen to vote, the voting is completely anonymous, the results are shown for all participants. The room can be from a community of neighbors to an entire country.

●**CryptoDev v.05** –one long term project. **Perfect 3D world.**

researched and immersed in the world of **NFTs** and decentralized games based on token rewards. Specifically, we are thinking of a 3d game similar to the famous **world of Warcraft**, with unique worlds, characters and fantastic enemies, that will be the NFT's, there will be a market place where you can sell and buy those planets, characters or join the enemy. 3d character creators will be rewarded for creating and selling their characters under the set parameters of the game. We are still a long way from this project but our minds do not rest.

This is a real moon shot. At the moment it's not fully within our wheel house. But you don't need to be able to see the end of the road to know it's there :).

Welcome to **CryptoDev World**, and welcome to our first project in Crip to Currency '**ChronoToken**' and welcome on this journey! We are really glad you are here with us, and invite you to stay for as long as you want. We'll always do our best to look after you.

Here's to a bright crypto future, together.
